

Electronic Signature

"We use Electronic Signature and the signature pad because we are virtually a paperless company at the office. We are constantly sending documents to funders and individual case workers in the field."

—Blair Anderson-Croft,
Quality Improvement Coordinator,
Bosco Homes

Developed to save organizations time and resources, Electronic Signature is Social Solutions' easy-to-use and straightforward signature module.

Sign directly within ETO[®] software instead of printing documents, signing them, and then uploading them back into ETO. Use a mouse, stylus, signature pad, or touchscreen device.

ETO[®] Signature also:

- Removes the need to store physical paper copies at office locations.
- Enables clients and participants to sign anywhere at any time.
- Never loses signed documents, saving all records within ETO[®]
- Provides one convenient place, the client ETO[®] record, where users can find all their signed copies.
